

# Revolutionizing Media Distribution

Affordable solution

Simple to use

Improved image distribution

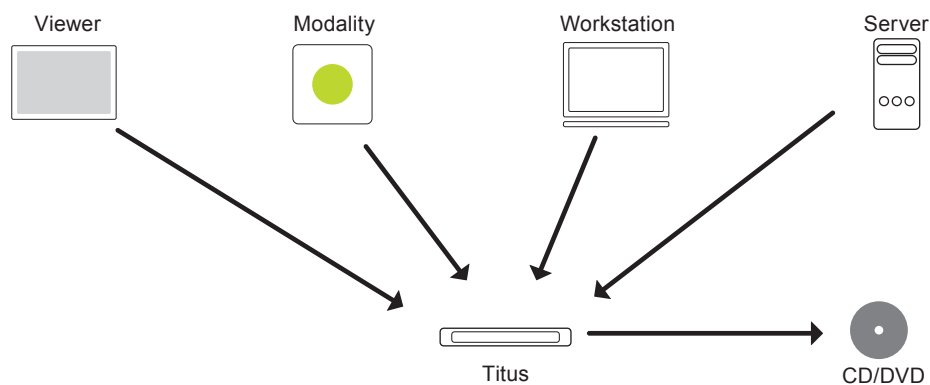

Customized labeling

Reduction in time spent for  
receiving patient studies

## What is Titus?

Titus is a versatile media creator for high volume imaging centers that allows users to create CD/DVD from across the enterprise for digital film distribution or archival purposes. With Titus, users get multiple benefits – from saving costs on printing films and image storage to improving the image of the organization.

Titus has the ability to receive and query/retrieve DICOM studies from multiple DICOM sources including modality, Server, Viewer or Workstation. It can create custom CD/DVD encompassing multiple patients which is conformant to DICOM 3.0 part 10 standard. Titus has a local archive for storage of received DICOM media.

## Why is Titus a smart choice?

- Hardware independent – Titus can be interfaced with different automated media publishing systems including Rimage and Primera.
- A pre-PACS solution – Going digital is a tough decision in terms of workflow changes and migrating historical data. With Titus the transition becomes much simpler as all data stored is DICOM conformant.
- A free evaluation copy is available that can be tested in live environments.
- Conforms to industry standards including DICOM part 10.
- Disc creation from anywhere in the imaging center – directly from modality, DICOM server, or viewer.
- Multiple disc creation options based on AE title – directly write to CD/ send to local archive/ directly write to CD and anonymize patient info.
- Titus can be interfaced with automatic disc publishing systems including Rimage and Primera or discs can be created using the local CD/DVD writer.

With Titus you can simplify your workflow, improve CD/DVD creation efficiency, reduce the cost of printing different CD/DVDs and save the time of moving around DICOM nodes to create jobs. The following are the product features:

## Local Database To Store All Jobs

### Job Creation

- Allow multiple users to create jobs concurrently
- Cue jobs based on priority
- Option to change priority based on rules or manually
- Receive jobs from any DICOM modality, DICOM viewer or PACS
- Track Job creation status
- Create Multi-patient CD/DVD
- Quer/Retrieve from any DICOM node
- Advanced/Pre-defined search parameters

### Media Burning

- Embedded DICOM viewer
- Option to add third party viewer
- Insert institution logo when the viewer opens
- Auto Select media depending on size of job
- Anonymize patient details
- Auto span of job into multi CD/DVD
- Track no. of media available in the external media writer - Auto version only

## Labeling

- Configure label based on DICOM information or use general format
- User defined labeling

## Housekeeping and Security

- Auto deletion of patient from local database based on time/date or hard drive watermarking
- Error tracking from media writer (Auto version only)
- Maintains application log file for easy troubleshooting
- Track CD/DVD recipient

## User Management

- Create multiple-users with different access rights
- Statistical usage reports - daily, weekly, monthly basis

## BENEFITS

- Workflow simplification
- Customer Satisfaction
- Reduction in costs
- Saves time
- Easy to use
- Highly flexible
- Sturdy performance
- Improved performance standards

Titus is available in both the Basic version and the Pro version.

## Why Ashva?

Ashva is constantly working only on one production - the solution. Our business and product development teams work in tandem keeping in mind this philosophy to create a difference. This approach ensures that every product is developed with accuracy, efficiency, and keeping the end-users in mind.

We provide world-class enterprise solutions for medical imaging industry that effectively integrate clinical industry that effectively integrate clinical and non - clinical workflows with business intelligence tools.
